The formation type may also have a large impact on the size of cuttings obtained at the surface. Cuttings produced in hard formations, such as limestone and claystone, are usually large, while those produced in soft formations, including sandstone and siltstone, are more rounded and may not reach the surface in the original condition (Egenti, 2014).

One of the most important parts of choosing a research programme is finding a supervisor who has relevant expertise in your area of interest. When you find a supervisor who, or a project that, aligns with your research interests, you should make contact with the relevant potential supervisor/lecturer/Professor or NUI Galway staff member to discuss matters further.
