18 Design and Analysis of Experiments by Douglas Montgomery: A Supplement for Using JMP The p-value, $\text{Prob} > |t| = 0.7976$, indicates that there is no evidence of a difference in the performance of the two tips. This p-value is larger than the standard significance level of $\alpha = 0.05$.

Design and Analysis of Experiments. These are designs in which two or more factors are varied simultaneously; the experimenter wishes to study not only the effect of each factor, but also how the effect of one factor changes as the levels of other factors change. The latter is generally referred to as an interaction effect among factors.

This is appropriate because Experimental Design is fundamentally the same for all fields. This book tends towards examples from behavioral and social sciences, but includes a full range of examples. In truth, a better title for the course is Experimental Design and Analysis, and that is the title of this book.

Basic Ideas Questions: What is the scientific question? What are the sources of variation? How many treatments are to be studied? What are the experimental units? How does the experimenter apply the treatments to the available experimental units and then observe the responses? Can the resulting design be analyzed or can the desired comparisons be made?
