Proper compression is also a much needed part of the "no start" problem analysis. There is a time and a place for a mechanical compression test, but that test is way down at the bottom of my diagnostic test list. On the late model diesel engine, accessing a point to get the compression can be a time consuming task and there are easier ways.

Starting problems. If the diesel engine won't start, but turns over quickly on the starter motor, then a fuel problem - as above - is the most likely cause. However, in cold weather it's worth checking the glow plugs: these are pre-heaters fitted to most diesel engines to warm the air in the intake to improve cold starting.

Diesel engine repairs: fuel, air, starting, wiring - boats.com

The exhaust is generally a result of an imbalanced air to fuel ratio, leaning on the side of too much fuel and not enough air. A faulty injector, injector pump, air filter, EGR valve, or even turbocharger could be the root of the problem. 4. Hard Starting. Diagnosing Light-Duty Diesels. If slow cranking isn't the problem, perhaps there's something wrong with the glow plug system. Most passenger car and light truck diesels have glow plugs to assist cold starts. The glow plugs are powered by a relay and timer that routes voltage to the plugs for the prescribed number of seconds.

Some of the components of the coolant start turning into a goo like substance that does a really nice job of clogging up all sorts of coolant related parts. If you have been doing any research about these engines you have no doubt heard about replacing the oil cooler. These need replaced because this goo will clog them up.
