Abstract: Emission aftertreatment—diesel particulate filters and SCR catalysts—was widely introduced on heavy-duty diesel engines to meet US 2007 emission standards. However, there were differences in the technology paths—some manufacturers initially attempted to meet the 0.2 g/bhp-hr NO_x limit using high EGR rates, without NO_x aftertreatment.

Differences between Octane Number. and Cetane Number Cetane number (diesel fuel) and octane number (gasoline) both measure the tendency of the fuel to ignite spontaneously. In the cetane number scale, high values represent fuels that ignite readily and, therefore, perform better in a diesel engine. In the octane number scale, high values represent fuels that resist spontaneous ignition and ...
