The flow loop used for the experiments is shown schematically in Fig. 1. It consisted of a swirl separator, a 0.8 m³ water storage tank, a 0.75 kW centrifugal pump and a particle injection system. Water was pumped from the reservoir to the swirl separator and returned by gravity to the storage tank via the underflow and overflow outlets of the separator.

Design methodology for the swirl separator - ScienceDirect

Underwater diving, as a human activity, is the practice of descending below the water's surface to interact with the environment. Immersion in water and exposure to high ambient pressure have physiological effects that limit the depths and duration possible in ambient pressure diving. Humans are not physiologically and anatomically well adapted to the environmental conditions of diving, and ...

Underwater diving - Wikipedia

The respiratory system (also respiratory apparatus, ventilatory system) is a biological system consisting of specific organs and structures used for gas exchange in animals and plants. The anatomy and physiology that make this happen varies greatly, depending on the size of the organism, the environment in which it lives and its evolutionary history.

Respiratory system - Wikipedia
