These lecture notes were prepared using mainly our textbook titled "Signals and Systems" by Alan V. Oppenheim, Alan S. Willsky and S. Hamid Nawab, but also from handwritten notes of Fatih Kamisli and A. Ozgur Yilmaz. Most figures and tables in the notes are also taken from the textbook. This is the first version of the notes.

Given the input signal, the output of an LTI system is the convolution of the input signal with the impulse response of the system. Hence, convolution plays a key role in relating the input and output signals of an LTI system. Convolution also arises when we analyze the effect of multiplying two signals in the frequency domain.

This is my least favorite book on the subject of signals and systems. The book is very wordy, and often explains things in overly simple terms, then presents extremely difficult problem sets as accompaniment. The section on convolution (a very simple concept, really) made my head spin.
