Pendulum Swings Again. Authors: M. C. Kelleher, D. J. Buggy. Br J Anaesth. 2014;113(3):335-337. Since the 1980s, evidence has been accumulating that survivors of major surgery generate a higher postoperative cardiac output than non-survivors, and that achieving a supra-normal oxygen delivery to the body's major organs (DO<sub>2</sub>, normally greater than 1000 ml O<sub>2</sub>/min) in the perioperative period ...

Results. This study was terminated early for safety reasons. A total of 60 out of the planned 240 patients were randomized. Thirty patients received normal saline and 30 patients received the balanced crystalloid, with a total volume of 3427 (2732-4130) ml and 3144 (1673-4926), respectively.

Plasma volume expanders - crystalloid, colloid, or a mixture of both - are used as fluid replacement in patients who have postoperative hypovolaemia. Despite numerous clinical trials there is little evidence that either classification of plasma volume expander is more beneficial to mortality than the other

The key difference between crystalloids and colloids is that the colloids contain much larger molecules than that of crystalloids.. Crystalloid and colloid solutions are largely useful for medical purposes. Hence, it is vital to know the difference between crystalloids and colloids so as to decide when to use these solutions.

Custodiol® HTK Solution is indicated for perfusion and flushing of donor kidneys, liver, pancreas and heart prior to removal from the donor or immediately after removal from the donor. The solution is left in the organ vasculature during hypothermic storage and transportation (not for continuous perfusion) to the recipient.
