The below formula best describes the electrogravitational action as I see it. It is the result of a two-system variable vector magnetic potential (A), and a force constant FQK, where FQK is independent of distance, much like David Bohm's quantum Q energy potential principle.

The nature of consciousness, the mechanism by which it occurs in the brain, and its ultimate place in the universe are unknown. We proposed in the mid 1990's that consciousness depends on biologically 'orchestrated' coherent quantum processes in collections of microtubules within brain

The diagram above as well as the photo to the left show a typical CD/DVD drive spindle motor design with 9 cogs and 12 magnetic poles. The main principal of driving such a motor is a particular sequence of commutation of the stator windings that creates several points in which the windings attract magnetically opposite poles of the rotor with maximum force.

This gives us two diametrically opposed concepts. The first is a combination of dynamic complexity and global optimization which we will call the systemic/global optimum approach. The second is the combination of detail complexity and local optimization which we will call the reductionist/local optima approach. These are two key concepts that underline much of the discussion and development in ...
