The first conscious use of feedback control of a physical system by mankind lives in. The goal can be accomplished by Laplace-transforming each differential equation and then generating a relationship, the transmittance, between the input and output of each block of the control system block diagram.

feedback control - 8.2. If both sides of the example were inverted then the output would become 'F', and the input 'x'. This ability to invert a transfer function is called reversibility. In reality many systems are not reversible. There is a direct relationship between transfer functions and differential equations.
