Common Rail Direct Injection (CRDi): The term 'CRDi' commonly refers to diesel engines. Although, there is a similar technology which the petrol engines also use it is known as Gasoline Direct Injection (GDI) or Fuel Stratified Injection (FSI).; Both these technologies have a similarity in design since they consist of a common "fuel-rail" which supply fuel to injectors.

The common rail system of fuel injection was used in marine diesel engines during the early and mid-19th century. These systems were well known in a particular type of engine famously called the "Doxford" engines or opposed piston engines. These engines are hard to find these days as they have been replaced by more efficient engines.

Common-rail engines have been used in marine and locomotive applications for some time. The Cooper-Bessemer GN-8 (circa 1942) is an example of a hydraulically operated common-rail diesel engine, also known as a modified common rail. Vickers pioneered the use of common-rail injection in submarine engines.
