Diesel Engine Cooling System

Nearly all diesel engines rely on a liquid cooling system to transfer waste heat out of the block and internals as shown in Figure 11. The cooling system consists of a closed loop similar to that of a car engine and contains the following major components: water pump, radiator or heat exchanger, water jacket...

Installing Coolant System Filters. The ideal amount of nitrite in a diesel cooling system is around 800 ppm (parts per million). If levels drop below this the protection of the cylinder liners is compromised. However, if the concentration of nitrite is greater than 800 ppm, other things are compromised.

Volvo Diesel Engine Cooling System . Charge air cooler, coolant-to-air type . Engine coolant is used to cool charge air in TWD engines. Coolant is pumped through the circuit via a pipe from the radiator to the charge air cooler. After coolant has passed through the charge air cooler tubes it is fed to the pump.

Play It Cool Part 1: Tips to Prevent Coolant Failure. "As diesel engine technology advances, greater stresses are being placed on the cooling system. EGR coolers put a greater thermal stress on the coolant and can cause breakdown of the glycol."

Cooling System Maintenance Keeps Diesel Engines Out of the ...

A water-cooled cooling system. Usually the pump sends coolant up through the engine and down through the radiator, taking advantage of the fact that hot water expands, becomes lighter and rises above cool water when heated. Its natural tendency is to flow upwards, and the pump assists circulation.

How an engine cooling system works | How a Car Works

Basic principles. In contrast, a liquid-cooled engine might dump heat from the engine to a liquid, heating the liquid to 135 °C (Water's standard boiling point of 100 °C can be exceeded as the cooling system is both pressurised, and uses a mixture with antifreeze) which is then cooled with 20 °C air.

Internal combustion engine cooling - Wikipedia

For example, the timing of the fan drive system in a Cummins 4BT diesel engine dictates the air speed over the radiator; too slow a speed can cause engine overheating. Lack of the proper air flow can cause the coolant not to cool to the proper temperature differential.
